

The Moore Inventor Fellows – 2020-2021 Guidelines

“50 inventors to shape the next 50 years.”

The Gordon and Betty Moore Foundation announces the sixth competition for [Moore Inventor Fellows](#). The foundation seeks to identify outstanding inventors and innovators who harness science and technology to enhance the conduct of scientific research, strengthen environmental conservation, or improve the experience and outcomes of patient care.

The Moore Inventor Fellows program focuses on supporting scientist-inventors at a critical prototyping stage to capture opportunities that otherwise might be missed. We seek to provide freedom and support to promising inventors with the most compelling ideas to pursue creative and disruptive innovations.

Program Overview

Gordon Moore’s contribution to the development of microelectronics helped produce the exponential growth of the digital revolution. In the spirit of Moore’s passion for science and penchant for inventing, the foundation seeks to support people who create new tools, technologies, processes, or approaches with a high potential to accelerate progress in the foundation’s three main areas of interest: scientific research, environmental conservation and patient care.

The foundation will provide nearly \$34 million through 2026 to support 50 Moore Inventor Fellows. The competition focuses on early-career staff at select research universities, medical schools and selected non-academic environmental research and patient care institutions. Each [eligible institution](#) may nominate two people.

Each fellow will receive \$200,000 per year from the foundation for three years. In addition, the foundation will provide the host institution with \$25,000 each year to cover costs associated with administering the grant, resulting in a total three-year award of \$675,000. Each host institution will be required to contribute \$50,000 in annual direct support of the inventor’s work. This can be “in kind” as released time or access to special facilities for which there is normally a charge. We expect each fellow will be personally engaged in pursuing their invention and we require each fellow to devote at least 25 percent of their own time to their invention. Fellows may use the grant funds to support their own salary to create this opportunity. They may also hire research personnel and purchase services, equipment, or supplies.

Who and What We Seek to Fund

Candidates must be faculty, research scientists, postdocs or other full-time staff who can receive funding through their institutions. Candidates must be no more than 10 years past receiving the terminal advanced degree in their field (M.S., Ph.D. or M.D.).

The scope of this call is intentionally wide: proposed projects do not need to fall within our current funding priorities but should be broadly within the program areas of foundation interest (science, environmental conservation, and patient care). For patient care, inventions should resonate with our focus on improving the experience and outcomes of patients with solutions that improve clinical diagnosis.

We aim to support inventions at an early stage that could lead to proof-of-concept of an invention or advance an existing prototype that tackles an important problem. We seek innovations that promise to make a long-lasting and meaningful impact by addressing underlying problems in their field, but a clear path toward commercialization is not a requirement. We are not interested in supporting fundamental research projects or projects already at a stage where significant venture capital is available. As with all our grants, we seek to measure progress toward a defined goal during the three years of support. The foundation's policy is that intellectual property that results from a grant must be managed and disseminated in a manner that leads to the greatest impact. Each award will include IP terms to reflect the needs of that project.

We recognize real invention can take surprising turns, so we seek creative individuals who have big ideas, deep knowledge and the courage to take smart risks. We recognize inventors and innovators come from a diversity of backgrounds, disciplines and experiences and seek creative individuals across a broad array of academic programs and research institutions. Examples of such programs include but are not limited to environmental science and conservation, remote sensing, artificial intelligence, big data, climatology, emerging infectious diseases, oceanography, biology, engineering, physics, chemistry, materials science, neuroscience, and public health.

Nomination Procedure

We are sending letters of invitation to the presidents, chief research officers and other officials of invited institutions. Each eligible institution can submit two nominations for consideration.

Nominations must be received by 5:00 p.m. PT Monday, November 16, 2020 with full application materials due by 5:00 p.m. PT Monday, December 14, 2020. Eligible institutions should designate a contact person who is authorized to submit the nomination. Please email inventors@moore.org with the name and contact information for this designated individual no later than **Thursday, October 1, 2020** to receive submission instructions.

Institutions may submit up to two nominations with the elements described below through the online application system, which will be accessible by the identified institutional contact for this program. The online [FAQ section](#) of the Moore Inventor Fellows website answers many questions, but we are happy to answer others addressed to inventors@moore.org.

Nomination and Application Requirements

1. Basic nominee information: **(Due Monday, November 16, 2020)**
 - A. Name of nominee, brief description of invention, keywords describing invention
 - B. Nominee institution, department and contact information
 - C. Statement of the institution's plan to assure the nominee has at least 25 percent of their time to devote to their invention and \$50,000 in annual direct support of the inventor's work
2. Candidate nomination packet to include the following materials: **(Due Monday, December 14, 2020)**
 - A. Statement of invention (no more than two pages, including citations; single-spaced, 12-point font with one-inch margins). The first paragraph should describe clearly and without jargon the invention, the problem it seeks to address and its potential impact. The statement of invention should also include the following information:
 - I. Description of invention
 - II. Importance to science, environmental conservation or patient care (please select one choice under the basic nominee section)
 - III. Stage of invention
 - IV. Current funding
 - V. Feasibility
 - VI. Potential impact
 - VII. Approach for measuring progress during the grant term
 - B. Summary Curriculum Vitae (no more than two pages):
 - I. Educational and professional background
 - II. Key accomplishments, honors and demonstrated areas of expert knowledge
 - III. Other background information relevant to this invention
 - C. One-page budget narrative that outlines how grant funds will be used
 - D. Two letters of reference that evaluate the promise of the applicant and the invention: one from an individual within the nominating institution and one

from an individual from another institution. Letters should be no more than two pages.

Selection Process

The selection process has two stages. In the first, each submission will be reviewed by foundation staff with advice from external reviewers. In the second, 10 finalists will be invited to make a virtual video presentation to a panel of advisors on the importance, plausibility, status and possible impact of their proposed line of work. After these presentations, the advisory panel and foundation staff will make recommendations to the foundation president for the 2021 fellowships. Please see below for a detailed timeline of the selection process.

Details of the proposed invention will be held confidential and members of the advisory committee will sign nondisclosure agreements before reviewing any applicant material. The foundation will work with selected fellows and their host institutions on agreeable language to be shared in announcements of the award winners.

Applicants will be considered solely on their merits and awards will be made regardless of age, sex, sexual orientation, gender identify, race, national origin, religion or disability.

Evaluation Criteria

All applications will be evaluated with the following criteria:

Inventor

1. Demonstrated creative potential

Strong technical ability for the proposed line of work

Invention (please refer to the [FAQ document](#) for more information)

1. Potential impact of the proposed invention.
2. The plausibility of the invention to achieve the stated impact.
3. The potential for measurable progress within a 3-year period.
4. Importance of the invention in areas of interest to the Moore Foundation (science, environmental conservation or patient care).
5. Invention at an early stage that requires this funding for rapid progress.
6. Potential scale of impact.
7. Ability of dedicated funding and time to propel this innovation to the next stage of development. Commercialization is not a requirement.
8. Strength of the institution's commitment to the applicant's invention activities.

Timeline for Awards

Wednesday, September 16, 2020	Requests for nominations sent to institutions
Thursday, October 1, 2020	Institutions to provide designated contact information
Thursday, October 1, 2020	Online application system opens
Monday, November 16, 2020	Institutions to provide basic nominee information
Monday, December 14, 2020	All application materials due
Week of April 5, 2021	Finalists selected
Thursday, May 6, 2021	Finalist in-person presentations
Week of May 10, 2021	Decision made; institutions notified
Fall 2021	Fellows announced
