Research Ethics and Policy Series

Trial Selection and Prioritization at Research Sites: Learning from Oncology and COVID-19

Holly Fernandez Lynch, JD, MBe

Assistant Professor, Medical Ethics and Health Policy

Perelman School of Medicine

Assistant Professor

Carey Law School

Weds. February 14, 2024 12pm-1pm ET Hybrid

Clinical trials require access to limited site-level resources: patients, staff, and infrastructure. Without careful selection between acceptable studies, the most important may be delayed, fail to adequately enroll, or never launch. Prioritization is therefore ethically critical but to date has not received much bioethical attention beyond consideration of how sponsors allocate funding.

This lecture will describe a conceptual ethical framework for site-level trial prioritization and provide insights from a pair of interview studies examining how research institutions decided which COVID-19 studies to pursue during the height of the pandemic and how NCI-funded cancer centers select which oncology protocols will be allowed to proceed.

Wednesday, February 14, 2024 12:00–1:00 PM

RCH B102AB, Richards Building, 3700 Hamilton Walk

Registration required for in-person and virtual: [Register REPS: Fernandez Lynch](#)
